Introduction:

MIR Traders. Is a professional Fence products and machinery manufacturer in Pakistan having experience more than 18 years. We supplies you better solutions and the quality Products. This is your one-stop wire mesh solution provider including Accessories and its machinery. Be assured that our dynamic team is always moving forward, researching, and seeking to provide you only the best.

Our main Projects:

- **Pak Afghan Border**
- **Sargodha Air base**
- **MianWali air base**
- **Skaiser air base**
- **Rajan pur air base**
- **Multan air base**
- **Wehari air base**
- **Allama Iqbal Airport Lahore**
- **Benazir Airport Islamabad**
- **Multan Int. Airport**
- **D. G Khan Airport**
- **CPEC City**

Motorways:

- **M2**
- **LSM**
- **M9**
- **CPEC**
- **Swat Motorway**

Our Clients:

- FWO
- Pak Army
- Pak Air force
- Civil Aviation
- NLC
- Wapda
- Descon
- Ikan engineering

Our Products:

- Chain Link Wire Mesh
- Fencing Accessories
- Razor Wire
- Barbed Wire
- Concertina Wire
- Crimped Wire Mesh
- Welded Wire Mesh
- Military Hesco Box
- Gabion Box

Chain Link Fence

Chain link fence, also referred to as hurricane fence or diamond-mesh fence, is one of the most durable yet inexpensive fencing materials that brings you and your properties security.

Constructed of steel wires woven and interlocked in a diamond pattern, chain link fabric maintains an open appearance, which does not obscure the view beyond the

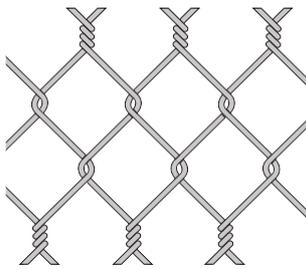

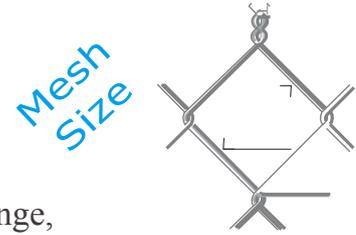

fence. Chain link mesh offers an array of benefits which makes it appealing to residential and commercial properties. Typical areas include home yards, playgrounds, tennis court, leisure sports field, park, boundary fencing, factory and construction sites, etc.

Features

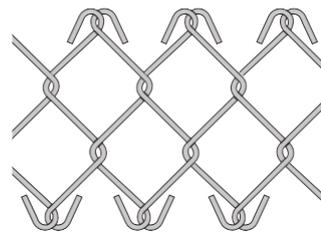

- **Visibility**—great for pets and children; it also does not obscure the view beyond the fence.
- **Security**—optimal security barrier, many intruders may be deterred by the chain link fence, various heights and barbed selvage are offered to meet any specific needs.
- **Low cost**—relatively inexpensive, one of the advantages over other fencing options.
- **Durability**—durable materials with utmost quality, two finishes (galvanized and vinyl coated) ensure to survive almost any harsh environment.
- **Versatility**—a variety of specifications and additions to meet any installation need; applicable to any place when safety is needed; could work as temporary fencing.
- **Easy to repair**—damaged part can be easily replaced, matching the rest of the fence.

Specification

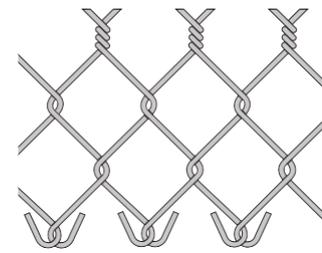

- Material: low carbon steel wire, galvanized wire, PVC.
- Surface treatment: galvanized, vinyl coated.
- Colours of PVC coating: dark green, black, brown, red, orange, white and yellow.
- Heights: 1.6' to 20' (Special heights available on demand).
- Gauges: 6, 8, 9, 10, 11, 11-1/2, 12, 12-1/2, 14, 16.
- Mesh size: 3/8", 5/8", 3/4", 1", 1-1/4", 1-1/2", 1-3/4", 2", 2-1/4", 2-1/2", 3", 3-1/2", 4".
- Roll length: 32' to 165' (Special lengths available on demand).
- Selvage: twisted-twisted, knuckle-knuckle, knuckle-twisted.

Twisted-Twisted

Categories by different materials and coatings

Galvanized chain link fence

Galvanized chain link fence is the traditional option for securing your properties both in Residential and commercial applications. We use hot-dipped zinc coating which conforms to ASTM A392 for long service life warranty. For added security of commercial properties, barbed wire or razor ribbon is available to install onto the fence top.

PVC chain link fence

PVC (Vinyl-coated) chain link fence is an ideal choice for homes, yards and light commercial projects that require security, durability and affordability. Environmentally friendly colors (black, green and brown) blend naturally with the surroundings and allow the beauty of the landscaping to show through. PVC slats are available in various colors if privacy is needed.

Chain Link Fence Fitting Accessories

We provide several types of hot-dipped chain link fence fittings to assemble a complete chain link fence system. For most residential applications, less weight die cast steel or aluminum fittings are commonly used. Whereas for commercial and industrial applications, fittings are usually constructed from cast iron or malleable steel. Dimensions differ from the size the chain link mesh; consult our experts to formulate your fencing project.

Chain Link Fence Gate

Is a versatile product in many aspects, here, FBC provides buyers with sufficient strength and durability chain link fence gate for using in residential, commercial and industrial area.

Chain link fence gate general has two types, the first one is swing gate and the second is slide gate. Swing gate can be classified as single-leaf and double-leaf swing gate. Chain link slide gate basically with rollers and wide use at entrance area

Chain link swing gate is one of the most common types of gates used for controlling people, vehicle or other things get in and get out of an area. It is classified into single swing gate and double swing gate.

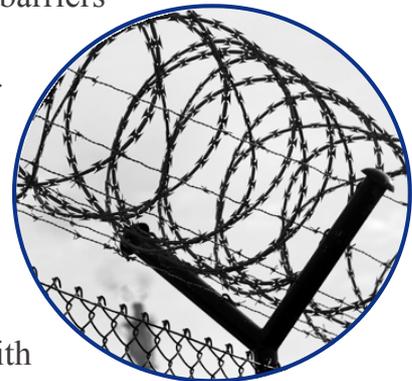

Razor Wire

Razor wire, also known as barbed tape, is a central strand of high tensile core wire and a punched steel tape with sharp barbs at close intervals uniformly. The razor tape is cold crimped tightly onto the spring steel core, and finally into rolls for easy transport and deployment. For long-lasting protection in various high security applications, razor wire could be fabricated from galvanized or stainless steel wire that is corrosion resistant.

Compared with traditional barbed wire for low security applications, razor wire is an ideal alternative when added psychological deterrent is desired. It is commonly used to increase the security level of fenced sites such as prisons, residential, commercial, airports, military bases, government agencies, borders and other perimeter barriers.

Features

- Modern and economical way as perimeter barriers against illegal invasion to restricted areas.
- Attractive design in harmony with natural beauty.
- A variety of sharp blades provide high level of deterrence to intruders.
- Corrosion and abrasion resistance for long service life.
- Enclosed high tensile core wire makes it difficult to cut with standard tools.
- Provides much better security compared with traditional barbed wire.
- It works as wall topping or standalone fence.
- Easy installation and low maintenance.
- Various dimensions for choice and bespoke ones are also available.

Barbed Wire

Barbed wire, also known as bob wire, is made of carbon steel. It can be used individually to form the barbed wire fence, and it also can be attached onto various fences, such as chain link fence, welded wire mesh fence or palisade fence for high level security barrier. It's widely used for farm fencing, ranch fencing, airport fencing, building fencing, and large construction site fencing and so on.

Compared with other fences, our barbed wire produce is stronger, more durable and has higher level of security. Its sharp edge can frighten intruders and thieves, and it is available to combine with other fences for security barriers.

Features

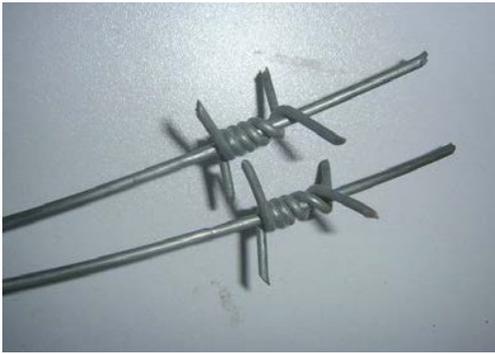

- Sharp edge frightens intruders and thieves.
- High stability, rigidity, and tensile strength to prevent cutting or destroying.
- Anti-acid and alkali.
- Harsh environment resistance.
- Corrosion and rust resistance.
- Available to combine with other fences for high level security barrier.
- Simple and convenient installation and uninstallation.
- Easy to maintain.
- Durable and long service life.

Application

Used individually to form the barbed wire fence or attached onto various fences for high level security fence barrier.

- Airport fencing.
- Prison fencing.
- Military site fencing.
- Construction site fencing.
- Square fencing.
- Farm fencing.
- Ranch fencing.
- Highway fencing.
- Railway fencing.
- Factory fencing.
- Residence fencing.
- Building wall fencing.
- Orchard fencing.
- Garden fencing.
- Plant fencing.
- River fencing.
- High voltage fencing.
- Road fencing.
- Private land fencing.

Used individually
Used with chain link fence
Used with welded wire mesh fence
Used with expanded mesh fence
Used with palisade fence
Used with field fence

Barbed wire arms

45 degree barb arm

Straight barb arm

Concertina Wire

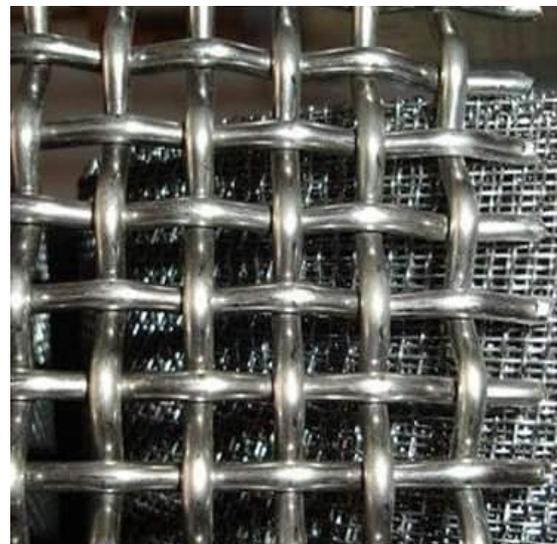

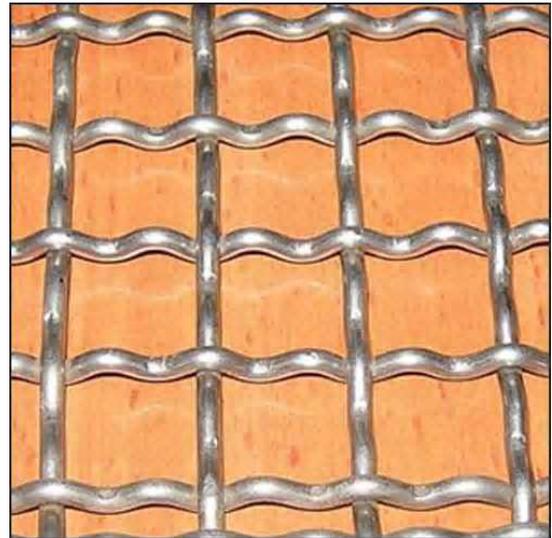

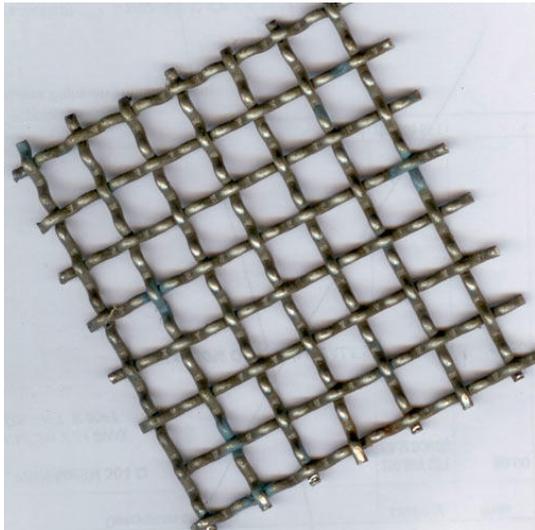

Concertina barbed wire is a kind of barbed wire. It is made of single strand wire and barbs. There are many small protrusions on the wire surface to prevent the barbs from sliding. Compared with double strand barbed wire, it has simple and light duty structure yet sharp and strengthens enough for border security of house, warehouse, factory, airport, prison, farm, highway, and railway, power generation stations, even in emergence events or military activities and so on.

Crimped Wire Mesh

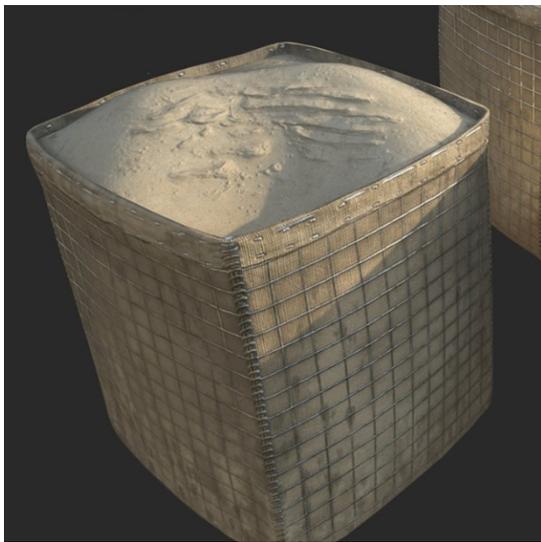

Crimped woven wire mesh is made of high quality is a manufacturing in Ferrous & Non Ferrous Metal. It has various weaving method, such as the double crimped, flat top crimped, intermediate crimped and lock crimped. The crimped woven wire mesh has square opening and rectangle opening, which has different wire diameters and applications. The pre-crimped weaving method can assure the accurate open area and

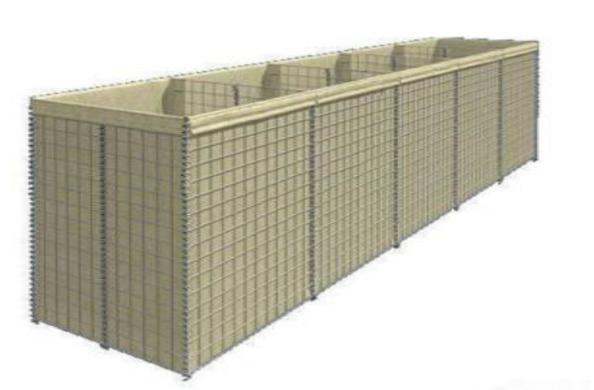

make the structure stability and smooth. The crimped woven wire mesh has various applications. The heavy duty crimped woven wire cloth can be used as vibrating screen in the mining, coal, crusher and other industries. The light crimped woven wire mesh with thinner wire diameter and small opening size can be used as Grilled Wire mesh, pig feeding, protective fences for the equipment and stairs.

Military Hesco Box

Hesco box is a hot product in the military field in these years. People filled the hesco barriers with sand and stone, then it can form with each other as a wall or block. It is also very easy to install. After we manufacture the hesco barrier, we will wrapped with shrink film or packed them on pallet. So when the hesco barriers arrived at the destination port, they just need to be extended and then connected with the pins. Low carbon steel Zinc Coated wire (anti rust strong ability)

Gabion Box

Gabion box is a strong-structure product with hexagonal or rectangular holes, which can be divided into woven gabion box and welded gabion box according to different fabrics. Gabion box is also called gabion baskets, which can be divided into galvanized gabion box

Gabion box has many characteristics, such as robust and flexible structure, excellent permeability, good corrosion and rust-resistance, high tensile strength and good durability. It can be used for protective applications and decorative applications, such as rock fall barrier, slope protection, retaining wall, flood controlling, military defense, gabion planter and landscape constructions.
